

As seen from the above image we have divided the entire webpage into 4 sections. Using the idea of the corporate design we have kept the logo in the top left corner of the webpage and this will be common within all the pages. We chose the logo 360 as in a circle it is the complete field similarly our webpage is a complete field for the user's web subscriptions. Along with the logo, the topbar and the sidebar are also common aspects for all the webpages of the web application other than the login/imprint page and the registration page. The topbar contains the home button, their account info for 360, their settings along with a drop-down menu for the logout button, and the switch accounts button. Similarly, the sidebar contains a drop-down menu for the different types of accounts a subscriber to 360 can have such as video streaming, music streaming, VPN, software suites, magazine, and the miscellaneous accounts which are not assigned to any one category. At the end of the sidebar, we have an add account option where the user can add another type of account and associate it with his/her 360 account. Under this, we have the explore button that will allow the user to stay updated with new services coming out such as new video streaming platforms and some recommendations on websites that the user might find interesting to subscribe to. Finally, the buttons will internally contain links that will redirect the users to the relevant pages. Also, the disclaimer is at the end of the webpage once the user scrolls down all the way to the bottom.

The imprint page has the login window as this is a key aspect to our website. The login doesn't work yet we will create a form to allow the user to access the layout\_logged\_in. Link to pages:
